

PROZEIN

protein + lassi & shakes

PROZEIN FOR PROGENE PEOPLE

**BRAND LAUNCH MARKETING PLAN
BY GROUP - ONE
AD&PR, IIMC DELHI**

PROZEIN FOR PROGENE PEOPLE

BRAND INTRODUCTION

"Unlock your true potential and awaken the beast within! Introducing **Prozein** the ultimate elixir crafted specifically for the 'Progene' people. Just as a Saiyan needs fuel to go Super or a ninja needs chakra, you need the right nutrition to conquer your battles. We are revolutionizing the beverage game with a high-power Protein Lassi that hits harder than a Baki Hanma punch.

Choose your power-up from four legendary forms: the explosive Mango, the tangy Strawberry, the elite Dry Fruit Kesar Pista, or the dark, guilt-free Chocolate. Each 200ml pack is a 'stat boost' loaded with 20g of premium whey protein, designed to repair muscle and fuel your vitality. It is lactose-free, low-fat, and contains zero added sugar — pure power with no filler. Whether you're chasing gains like Zoro or plotting to change the world like Light Yagami, Prozein fits your grind. Best of all? This power is accessible to every hero at just ₹60. Don't just drink; evolve with Prozein."

USP

“Protein that doesn't taste like protein.”

We are selling a tasty, flavoured lassi that delivers 20g protein but still tastes like actual lassi.

3C's

COMPANY

- The Core Mission: To democratize high-performance nutrition by turning it into a pop-culture lifestyle. We are not just selling a drink; we are selling the "Main Character Energy" every Gen Z desires.
- The "Masstige" Strategy: Positioned as a "Mass-Prestige" brand. We offer the premium quality associated with elite brands, but at an accessible price point (₹60–₹90), bridging the gap between basic dairy and luxury supplements.
- Visual Storytelling: While competitors use clinical white bottles or generic fruit splashes, **Prozein** uses dynamic, anime-inspired character art that acts as a collectible badge of honor for the user.
- Flavor Coding: Our flavors aren't just names; they are "Power Levels" (e.g., Mango Kaioken, Dark Mode Chocolate), gamifying the consumption experience.

CUSTOMER

- Primary Avatar: The 18–35-year-old active urbanite. They grew up watching Dragon Ball Z and Naruto and now view fitness as their personal "Training Arc."
- Psychographics:
 - The "Aesthetic" Driven: They document their life on Instagram/Snapchat. They will not post a photo of a boring Amul carton, but they will post a **Prozein** bottle because it signals "coolness" and "fitness."
 - The "Utility" Bore: They know they need protein but hate the hassle of shaker bottles, powders, and messy cleanup. They want "Grab-and-Go" fuel.
 - Buying Power: They find ₹100+ daily drinks (Raw Pressery/Starbucks) unsustainable but are willing to pay ₹60–90 for a premium upgrade over the ₹25 basic options.

COMPETITION

A. The "Utility" Giant: Amul (High Threat on Price)

Product: Amul High Protein Lassi / Buttermilk.

Price: ~₹40 (200ml).

The Threat: Unbeatable distribution and lowest price.

Why We Win: Amul is a "family brand" — it's what your mom buys for the fridge. It lacks aspirational value for Gen Z. Carrying an Amul pack at the gym doesn't look "cool"; carrying Prozein does. We win on Brand Flex.

B. The "Clinical" Elites: MuscleBlaze & Raw Pressery (High Threat on Perception)

Product: MuscleBlaze Sparkling Protein Water / Raw Pressery Smoothies.

Price: ₹110 – ₹150+ per unit.

The Threat: High trust among hardcore gym-goers (MuscleBlaze) and clean-label elitists (Raw).

Why We Win: They are priced out of the "daily habit" market for students and young pros. MuscleBlaze feels "too hardcore/masculine," and Raw feels "too elite." Prozein offers a similar protein hit (20g) at nearly half the price, making us the smarter daily choice.

C. The "Niche" Player: Strive / Akshayakalpa (Medium Threat)

Product: Strive (Vegan Protein Shake) / Akshayakalpa (Organic Milk).

Price: ₹80 – ₹100.

The Threat: Captures the vegan/organic-specific audience.

Why We Win: Taste. Plant-based and organic drinks often compromise on creamy flavor. Prozein (Whey-based) offers superior indulgence and taste, which is the #1 driver for mass adoption. ✨

MARKET SEGMENTATION

1. Demographic Segmentation •

- Age: 18–35 (core),
- teens, seniors
- Lifestyle: Students, gym-goers, professionals
- Gender: Male & female health seekers •
- Income: Middle-income, value-conscious

2. Geographic Segmentation

- Tier 1 Cities: Mumbai, Delhi, Bengaluru
- Tier 2 Cities: Jaipur, Indore, Nagpur
- Semi-urban: Strong lassi culture
- Rural (Selective): Dairy familiarity, bilingual packaging

3. Psychographic Segmentation

- Fitness-oriented: Quick protein intake
- Busy lifestyle users: On-the-go drinks
- Taste lovers: Prefer flavored affordable drinks
- Health-conscious: Seek probiotics & clean labels
- Value seekers: Low cost per gram protein

MARKET SEGMENTATION

4. Behavioral Segmentation

- Post-workout drink
- Meal/snack replacement
- Daily nutrition boost
- Impulse buying on quick commerce
- Regular weekly consumption

5. Key Customer Personas •

- Gym Youth: Needs fast affordable protein
- Office Professionals: Need energy + convenience
- College Students: Taste + affordability
- Mothers/Families: Daily healthy nutrition

6. Summary Insight

- Protein Lassi targets young,
- urban, health-aware,
- value-seeking consumers who want a tasty, convenient,
- everyday protein drink rooted in Indian culture

MARKET GAPS & OPPORTUNITIES

• Price-Protein sweet spot:

While Amul delivers 20g protein for ~₹50 (Blueberry Shake), most flavored lassis offer only 15g. Our Brand can fill the niche of “20g/200ml at ≤₹90”. Affordability is key for scale: Indian middle-income youth respond well to “masstige” pricing (premium features at accessible prices)loestro.com. If Our Brand can match or beat Amul’s protein density (20g) at ₹60–80, it will outflank cheaper 15g drinks and pricier shakes alike.

• Brand Identity & Aesthetics:

No current Indian RTD protein brand harnesses pop culture aesthetics. Our Brand’s collectible anime packaging is a clear differentiator. This appeals to the identified gap in “cultural currency” among Gen . Limited-edition drops (e.g. seasonal or character tie-ins) could drive virality. Visual impact also matters: flashy bottles or cans are more likely to be shared on social

Channel Gaps:

Few players have a strong omni-channel presence. Our Brand can target niche outlets (anime stores, comic-book shops, pop-culture cafes) where competition is minimal. Subscription or bundled sales (e.g. 6-pack “collector bundles”) via app delivery could capture impulse demand.

• Flavor Innovation:

Beyond standard mango, chocolate, strawberry, an unexplored avenue is fusion flavors that resonate with youth. Examples: Matcha lassi (East Asian meets Indian), boba tea-inspired lassi, saffron cardamom lassi (desi premium), or protein chai latte (masala + protein). Even “gamified” or caffeinated variants could engage anime gamers (e.g. guarana-infused lassi).

• Ingredient Trends:

The clean-label trend opens space for plant-based variants (e.g. coconut or almond “lassi” for lactose-intolerant vegans). A coconut-based protein lassi (using coconut milk/coconut flour) could stand out as both familiar (coconut flavor) and plant-friendly. Similarly, “gut-friendly” lassis with probiotic cultures or added fiber can broaden appeal.

“PESTEL ANALYSIS”

Political

- FSSAI regulations mandate that "High Protein" product must contain 20% of the RDA per 100g (for solids) or 10% of the RDA (Recommended Dietary Allowance) per 100ml (for liquids).
- India's Packaging Waste rules require Extended Producer Responsibility — Prozein must ensure recyclable or reusable packaging streams are in place.
- Tax structure: GST on dairy-based health drinks is 5%. Some states offer cold-chain incentives (Punjab, Haryana) — relevant for lassi logistics

Economic

- Indian RTD beverages market (functional/protein sub-segments) growing at 9–15% CAGR. Middle-class expansion in North India (projected 6–7% annual growth, reaching 1 in 3 households by 2025) supports premium-yet-affordable ("masstige") brands in the ₹60–90 range.
- Amul's 20g whey protein blueberry shake at ₹50 proves low-cost viability for high-protein RTDs
- Raw material volatility (milk, whey, fruit pulp) can erode gross margins by up to 8% without pre-negotiated supplier contracts, as seen in 2025 FMCG input cost pressures.

“PESTEL ANALYSIS”

Social

- Gen Z in urban India is increasingly health-focused, sugar-conscious (54% opting for low/no-sugar drinks), and engaged with anime (30–50% of 18–30s report regular viewership, per 2025 surveys). Visual appeal and cultural ties fuel impulse buys in RTDs.
- 83% of urban Indian consumers read nutrition labels before purchase, with 58% prioritizing protein and low sugar. Clean labels are now a baseline expectation amid rising health awareness.

Anime collaborations boost Japanese and Korean brands: Pop culture tie-ins have driven 20–40% sales uplifts for merchandise and lifestyle products, including RTD beverages, in India's growing anime market (projected \$528M by 2030).

Technological

- UHT processing gives 6-month shelf life without preservatives — the backbone of affordable scale.
- Plant-based innovations (pea/soy blends) and flavor tech (e.g., mango-local twists) enable smooth, fortified shakes for lactose-free crowds.

“PESTEL ANALYSIS”

Environmental

- Eco-packaging like recyclable TetraPaks appeals to 65% of urban buyers; plant-based proteins cut dairy's water/carbon footprint by 50–70%

Legal

- FSSAI mandates clear protein/sugar labels and no false claims—non-compliance risks fines up to ₹10L, so test rigorously.
 - Clean-label rules ban artificial additives; ensure 100% natural for shakes/lassis to avoid 2025 enforcement hikes.
- 

COMPETITIVE LANDSCAPE

Amul - The Scale Threat

Products: High-Protein Blueberry Shake

Price: ₹50 (200ml)

Distribution: Pan-India

Strengths: Cost control, brand trust, reach

Weaknesses: Non-availability

Epigamia & Premium Players

Epigamia: Chilled 25g shakes @ ₹140, sleek and urban

Raw Pressery: 18g shakes @ ₹100+, clean-label aesthetic

Strengths: Taste, clean nutrition

Weaknesses: Expensive, cold chain dependent, no fandom appeal

MuscleBlaze & Fitness Brands

Products: 18g protein shakes, supplement-aligned

Price: ₹90–100 (packs)

Strengths: Fitness credibility, gyms

Weaknesses: Boring branding, male-heavy tone, not lifestyle

prozein

SWOT Analysis

A brainstorm session where we identify our strengths, weaknesses, opportunities, and threats.

Strengths

What are we doing good at?

Cultural Familiarity & Trust: Lassi is a traditional, highly-trusted beverage in countries like India, giving a strong initial brand acceptance compared to foreign protein shakes.

Affordability (Relative): Compared to high-end imported protein powders or shakes, it can be manufactured and priced more affordably for a broader consumer base.

Ready-to-Drink (RTD) Convenience: Packaged protein lassi fits the growing consumer demand for on-the-go, convenient nutritional drinks.

Taste and Satiety: Lassi is generally considered a delicious, filling, and refreshing beverage, making it a more appealing and sustainable protein source than some powdered shakes.

*** High Protein & Probiotic Content:** It offers a dual benefit of high protein (for fitness/nutrition) and natural probiotics (for gut health) from the curd/yogurt base.

Weakness

What do we lack? What can we improve on?

Manufacturers must work hard to mitigate this perception by offering low-sugar/no-sugar options

Short Shelf Life: As a fresh dairy product, lassi generally has a shorter shelf life than UHT or powdered beverages, increasing inventory risk and limiting distribution reach without a robust cold chain.

Texture and Consistency: Maintaining a consistent, thick texture in mass-produced, packaged form can be a manufacturing challenge compared to simple liquid drinks.

High Sugar/Calorie Perception: Traditional lassi is often high in sugar and calories. .

Lactose Intolerance Barrier: Being a dairy-based product, it is unsuitable for lactose-intolerant or vegan consumers, limiting the potential market size.

Opportunities

Type your thoughts here.

What can we do more of? What trends can we take advantage of?

Growing Health Consciousness: The rising global awareness of protein deficiency and the desire for high-protein diets (for muscle gain, satiety, and general wellness) is a huge market driver.

Functional Food Trend: Consumers are increasingly seeking functional beverages (drinks with added health benefits like vitamins, probiotics, or protein) over simple sodas.

Expansion in Non-Traditional Markets: Introducing lassi to Western and East Asian markets as an exotic, nutritious ethnic beverage could tap into new consumer segments.

E-commerce and Quick-Commerce: Leveraging fast online delivery channels for cold, perishable products can overcome traditional distribution hurdles.

Product Diversification: Opportunity to introduce plant-based protein lassi (e.g., soy, oat, or pea protein-based lassi) to capture the vegan and lactose-intolerant market.

Threats

What's stopping us? What are our competitors doing?

Intense Competition: Protein lassi faces stiff competition from established categories like protein shakes/powders, traditional dairy companies (yogurt, flavored milk), and other functional beverages.

Fluctuating Dairy Prices: The product's main raw material, milk/curd, is subject to seasonal and global price fluctuations, which can squeeze profit margins.

Strict Food Safety Regulations: Being a perishable dairy product, it is subject to stringent food safety and cold chain regulations, increasing operational complexity and costs.

Substitutes and Alternatives: Consumers have many substitutes, including traditional lassi, protein water, plant-based milkshakes, and yogurt drinks, which may be preferred for lower calories or longer shelf life.

THE ELEMENTAL ARSENAL - 5 FLAVORS TO RULE THEM ALL

- **Mango** (The Golden Standard): India's undisputed favorite. We use real Alphonso pulp to deliver an authentic tropical burst that perfectly masks the bitterness of whey.
- **Strawberry** (The Speedster): Light, tangy, and refreshing. Engineered to be a "gulp-able" thirst quencher for post-cardio recovery, avoiding the heaviness of typical shakes.
- **Dry Fruit** (The Powerhouse): A nod to traditional Indian strength (Kesar Pista). Packed with real crushed almonds and pistachios for a rich, premium texture you can chew.
- **Coconut** (The Market Disruptor): A rare innovation in protein. It combines creamy nutrition with tropical hydration, offering a unique, lightweight vibe that competitors lack.
- **Blueberry** (The Exotic Edge): Targeting the modern, smart consumer. A sophisticated, antioxidant-rich flavor that breaks the monotony of standard chocolate and vanilla drinks.

PLACE & PROMOTION

Place (Where we sell it)

The product needs to be available where the target customer makes healthy, convenient purchasing decisions.

Primary Channels (High Visibility):

Modern Retail: Supermarkets and hypermarkets (in the dairy/refrigerated drinks section).

E-commerce/Quick Commerce: Available on grocery apps like (Blinkit, Zepto, Instamart, Big basket) for fast delivery to urban professionals.

Secondary Channels (Convenience):

Cafeterias/Canteens: Corporate offices, universities, and hospitals.

Grab-and-Go: Convenience stores and petrol station outlets.

Promotion (Communication Strategy)

The communication must clearly position the product as a healthy, tasty, and convenient way to meet protein goals.

Digital Marketing: Target consumers on social media platforms and fitness apps, using influencers who promote a balanced, active lifestyle.

In-Store Sampling: Offer tastings at gyms and supermarkets to let customers experience the great taste and texture.

Point-of-Sale (POS): Use visual aids near the counter or checkout to highlight the protein content and "ready-to-drink" convenience.

Partnerships: Collaborate with fitness events, marathon organizers, or nutritionists.

"INITIAL MARKET PULSE"

The Demographics:

- * Surveyed 30 Gen Z & Millennials (Ages 18-30).
- * Mix of Gym-goers and Casual students.
- * The Findings

Are you willing to pay a higher price for a product specifically because it offers clear health or functional benefits (like high protein, low sugar, etc.)?

30 responses

When you realize you need a quick protein boost, which solution do you most often rely on?

30 responses

[Copy chart](#)

How important is "healthy but still tastes good" to you in a protein drink?

30 responses

When buying a protein drink, which factor is **most important**? (Select any two)

30 responses

[Copy chart](#)

Compared to a regular Lassi priced at ₹X, what is the maximum you would pay for the higher-protein version?

 Copy ch

30 responses

- Up to ₹X + 10% (e.g., if X is 100, up to ₹110)
- Up to ₹X + 25% (e.g., up to ₹125)
- Up to ₹X + 50% or more (e.g., up to ₹150+)
- I would only pay ₹X or less.

Does attractive packaging like your favourite anime character on bottles or packages will influence your buying behaviour?

30 responses

- Yes
- No
- Maybe

I mostly seek out high-protein drinks when I am trying to combat...

 Copy ch

30 responses

- Mid-day energy crashes/fatigue
- Hunger pangs between meals
- Fatigue after a workout
- Cravings for unhealthy snacks

How often do you find yourself struggling or unable to meet your personal protein goals for the day?

 Copy ch

30 responses

- Almost every day
- A few times a week
- Rarely, only on busy days
- Never, I plan my meals well

A muscular anime-style male character with brown hair and intense eyes is shown in a gym setting. He is shirtless, revealing highly defined muscles, and is drinking from a blue bottle labeled 'PROZEIN'. The background is a dark, industrial-looking gym with various equipment visible.

THANKYOU
